

ONE PAGE SUMMARY

VIEWING DATA WITH PANDAS

- To see quick overview of the DataFrame, we **head()** method. The **head()** method will return specified number of rows, starting from 0th row.
- To see bottom rows there is **tail()** method with the help of this method, we can see bottom rows.
- To see the information about the columns name, columns data type, and No Null Count, use **info()** method.
- The No Null Count value is very useful for data cleaning purpose, one can get information about the how much empty or null values are present in the dataset
- There is also **describe()** method, which will give statistical overview of whole dataset, by seeing this numbers we can assume no of assumptions.

In [4]:

```
#Importing pandas library using aliase pd
import pandas as pd
```

In [7]:

```
# Reading titanic csv file assigning it to df variable
df = pd.read_csv("Titanic.csv")
```

In [9]:

```
# Reading data with head() method
# By default head() method will show top 5 rows starting from 0th index
df.head()
```

Out[9]:

	PassengerId	Survived	Pclass	Name	Sex	Age	SibSp	Parch	Ticket	Fare
0	1	0	3	Braund, Mr. Owen Harris	male	22.0	1	0	A/5 21171	7.2500
1	2	1	1	Cumings, Mrs. John Bradley (Florence Briggs Th...	female	38.0	1	0	PC 17599	71.2833
